

CO₂ bottles

- To produce carbonated water, you need to have a reliable source of food grade CO₂ gas. OASIS are able to provide you with two solutions, both of which have been engineered to fit discretely inside the front compartment of our carbonated coolers
- You can choose from refillable or disposable cylinders
- When installed in an OASIS carbonated cooler, the refillable 1.5 kg CO₂ cylinder will produce approximately 250 litres of carbonated water whereas the 1.2 kg disposable cylinder will produce approximately 200 litres
- Pressure regulators are available for each cylinder type

OTHER USEFUL INFORMATION

- The total max height of CO₂ bottle that can be fitted inside the compartment is 560mm incl CO₂ Regulator
- The max diameter of the CO₂ bottle is 135mm
- Larger CO₂ bottles must be installed outside the cooler

Threads on CO₂ cylinders to connect pressure regulator:

- Refillable: W21,8x1/14" right - according to DIN 477 no. 6
- Disposable: M11x1
